

Cross-linker monomer

PAC-C-MBAA

N,N'-methylene bisacrylamide

Physical properties

CAS No. : 110-26-9

Form : crystal – powder

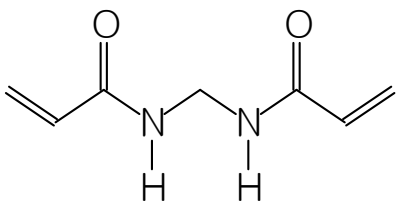

Color : White – Almost white

Melting point/freezing point : 300°C

Vapor Density : 5.31

Solubility: Soluble in : Water (3.5g/100mL,30°C)

Application

A bi-functional crosslinker capable of free radical polymerization. It can be used to propagate and form extensive polymer networks to achieve application properties, such as higher tensiles, impact modification and superabsorbancy.

- Ion Exchange Resins
- Thickeners
- Super-absorbers
